

SOC-as-a-Service

Modern multifunction SOC-as-a-Service for 360° coverage

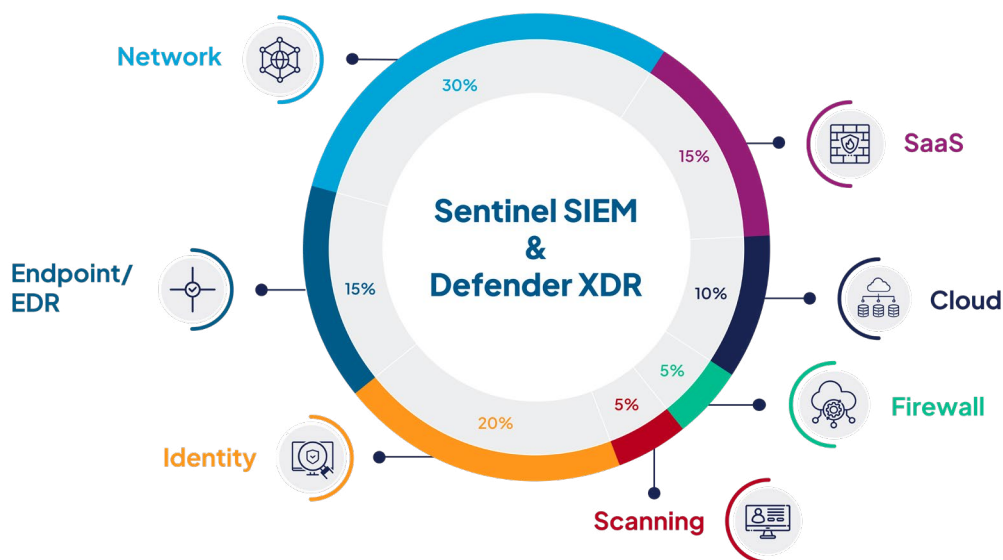

Calian's security operations centre (SOC) easily scales to meet your cybersecurity needs, including risk and compliance, which are pivotal in your decision to build internally or partner with a provider.

Calian's ability to be technology agnostic gives you the necessary level of protection within the perimeter and in hosted and cloud environments. We have the flexibility, manpower and expertise to work with your IT and security leaders to define, build and manage a reliable 24x7x365 modern SOC that alerts you of every type of threat.

Calian SOC with Microsoft SIEM

Our SOC monitors and correlates real-time security events by leveraging various sources to detect events and enhance incident response. The ability to ingest and capture all logs in a customer's environment allows for better detection and investigation during an incident.

As a trusted Microsoft partner, we understand best practices and can design and customize a solution that fits your needs. At the core of this SOC is Microsoft Sentinel, a modern cybersecurity SIEM solution that uses cloud and AI to detect cyber threats before they impact your business. We're ready to help with assessments, migrations, hunting expertise, incident response or managed security services.

XDR – the perfect partner

The Calian SOC team leverages XDR's function and capabilities as a part of the overall cybersecurity architecture. In addition to processing traditional log sources and responding to alerts and notifications, we use automation and customized playbooks to respond and take action based on scenarios specific to each customer's environment. This helps to alleviate the day-to-day pressures on security teams, allowing them to focus on high-priority issues and events.

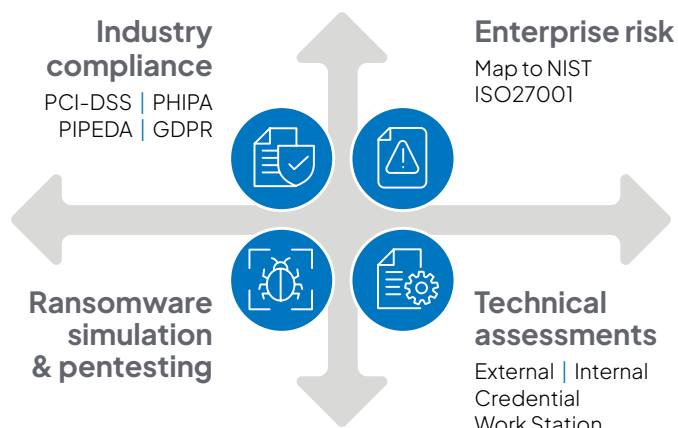

A SOC must provide ongoing, real-time visibility and coverage into all points of entry in a customer's environment and infrastructure. Calian's unique approach enables that level of coverage and assurance.

The dark web myth

The dark web is known as a source for cyberattack tools, hackers for hire and instructions on how to carry out a breach. However, we believe that cybercrime pervades all areas of the internet, and that malicious actors may be closer than you imagine. As part of our extended monitoring within our SOCaaS, Calian monitors and combats cybercriminal activity all over the internet, not just on the dark web. Calian leverages the full power of cyber threat intelligence and digital risk protection to monitor cybercrime wherever it is—on the surface, deep or dark web—providing comprehensive protection against malicious activities in every area of the internet.

Consulting and ransomware simulation

As part of our cyber consulting, Calian provides assessments and penetration testing to expose security gaps and non-compliance in a customer's SOC environment. There are four critical areas the Calian cyber consulting team uses to assess an organization's controls and maturity.

Why Calian for your SOC?

SOCaaS is a solution for enterprise organizations who requires a partner to be lock-step with their risk mitigation goals and the cyber challenges that demand the daily monitoring and attention. Calian's SOCaaS is a valuable solution for organizations looking to bolster their cybersecurity efforts while controlling costs, benefiting from 24x7x365 monitoring and expert support, and meeting regulatory compliance requirements. The Calian SOCaaS allows organizations to focus on their core business while leaving the complexities of security in the hands of our certified experts.

Calian® helps people communicate, innovate, learn and lead safe and healthy lives. Every day, our team embodies our core principles of unwavering customer commitment, integrity, innovation, respect and teamwork, to engineer reliable solutions that solve complex challenges. That's Confidence. Engineered.

We are a growing company headquartered in Ottawa with offices and projects spanning North American, European and international markets with a focus on innovative healthcare, communications, learning and cybersecurity solutions.
