

Unlock the full potential of your business with Microsoft Copilot

Calian's Copilot implementation helps your employees harness the power of data and AI to work smarter and faster

If your business is not leveraging the capabilities of AI to streamline workflows, you are already behind. Microsoft 365 Copilot integrates advanced AI capabilities directly into the Microsoft 365 suite. By adopting customized Copilot, your business can achieve enhanced productivity, improved decision-making, and optimized operations through the power of AI.

Working smarter with Copilot in Azure

Leveraging Microsoft Copilot in Azure (Azure Custom Copilot), your organization can drive operational efficiency and achieve better results. Copilot acts as a companion to Azure, enabling your team to operate, optimize and troubleshoot applications and infrastructure effectively.

How can I use it?

Copilot helps you unlock untapped potential in Azure to gain new insights, discover more benefits of the cloud, and work in both the cloud and the edge. Copilot optimizes your Azure environment, providing access to hundreds of services and thousands of resources.

Integrating with other systems in Azure requires planning to ensure seamless operation and maximum benefit. Calian's team of experts will plan and customize your environment based on organizational needs, considering existing infrastructure, the use of API's and SDK, data integration, security and compliance.

Check out our Azure Custom Copilot offerings on the Microsoft Azure Marketplace.

Working smarter with data

Copilot's AI capabilities bring new and innovative ways to transform, analyze, generate insights, create visualizations and report within Fabric and Power BI.

How can I use it?

Copilot boosts Power BI, enabling it to summarize key data insights in seconds. Ask Copilot questions about the data to better understand the sources contributing to the report you are analyzing.

Customize how you use Copilot to generate insights from your data. Introducing Fabric provides real-time intelligence to transform data and simplify complex tasks. Data science and engineering gets a boost with the ability to build robust data pipelines and craft complex analytical models—taking raw data to meaningful conclusions.

The expert AI team at Calian can create insightful reports and visual dashboards, enabling your team to make better business decisions.

Calian's integration services

Our expert integration services ensure that your team can leverage Copilot to its full potential, transforming your workflow and driving significant business results.
